

(JIRA)

EXPERIMENT 11:

Link Jira tasks with Confluence to streamline task tracking and progress monitoring for the Library Management System development.

- ☐ **Create a new page in Confluence titled "Library Management System Project Overview."**
- ☐ **Embed at least 5 Jira issues related to the development of the Library Management System (e.g., tasks from the sprint like "Develop book search functionality," "Create user login page," etc.).**
- ☐ **Use the Jira macro to display issues with status (e.g., "To Do," "In Progress," "Done").**
- ☐ **Add a progress bar in the Confluence page to visually track the completion of each embedded Jira task (e.g., percentage of tasks completed in the sprint).**
- ☐ **Submit a screenshot of the Confluence page showing the embedded Jira tasks and the progress bar.**

Aim

The objective of this experiment is to link Jira tasks with Confluence to streamline task tracking and monitor the development progress of a **Library Management System** using integrated Atlassian tools.

Software Requirements

Software: Jira Cloud, Confluence Cloud (Web Applications)

Web Browser: Google Chrome / Microsoft Edge

Internet Connection: Required

Theory

Jira and Confluence are widely used Atlassian tools for Agile software development and project documentation. Jira is used to create, assign, and track project tasks, while Confluence is used to create and manage project documents. By linking Jira issues with Confluence pages, teams can monitor task progress, improve collaboration, and maintain project documentation in one place. A progress tracker provides a visual representation of task completion, making project monitoring easier.

Procedure

Step 1:

Open a web browser and log in to your Atlassian account. Launch **Confluence** from the Atlassian workspace.

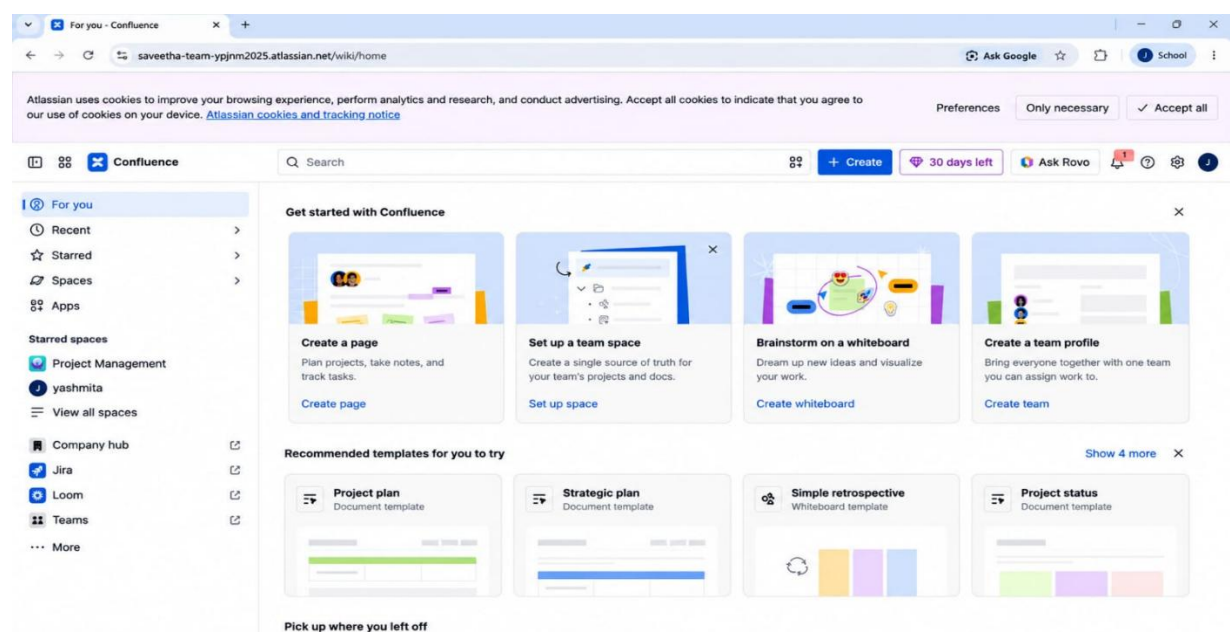

Figure 1. Opening Confluence.

Step 2:

Create a new **Blank Page** and enter the title "**Library Management System Project Overview.**"

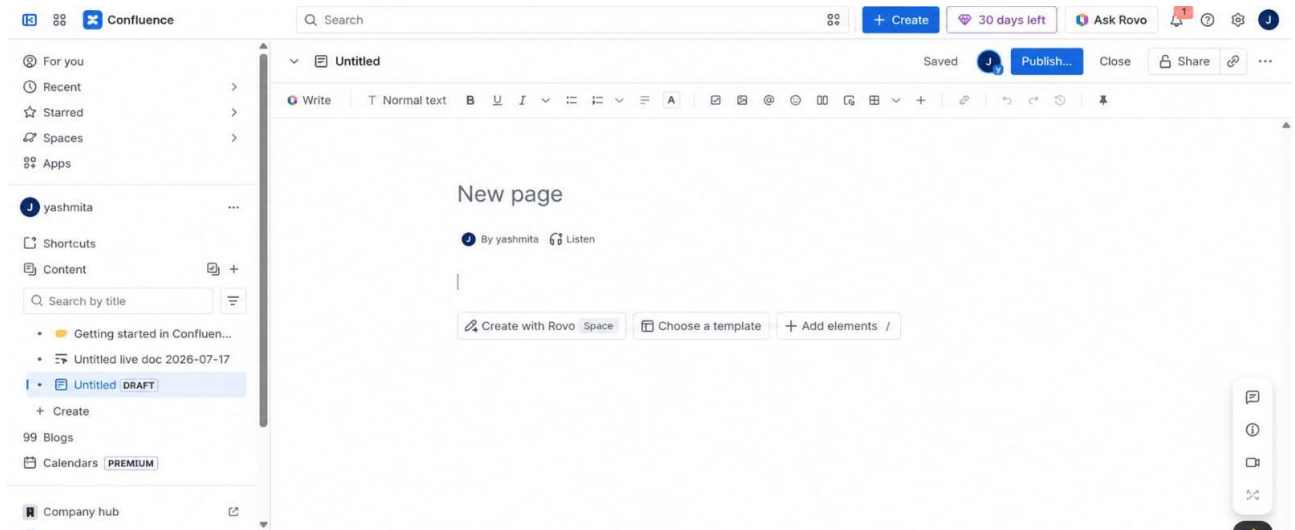

Figure 2. Creating a Confluence Page.

Step 3:

Open **Jira Software** and create at least **five tasks** related to the Library Management System. Assign appropriate workflow statuses such as **To Do**, **In Progress**, and **Done**.

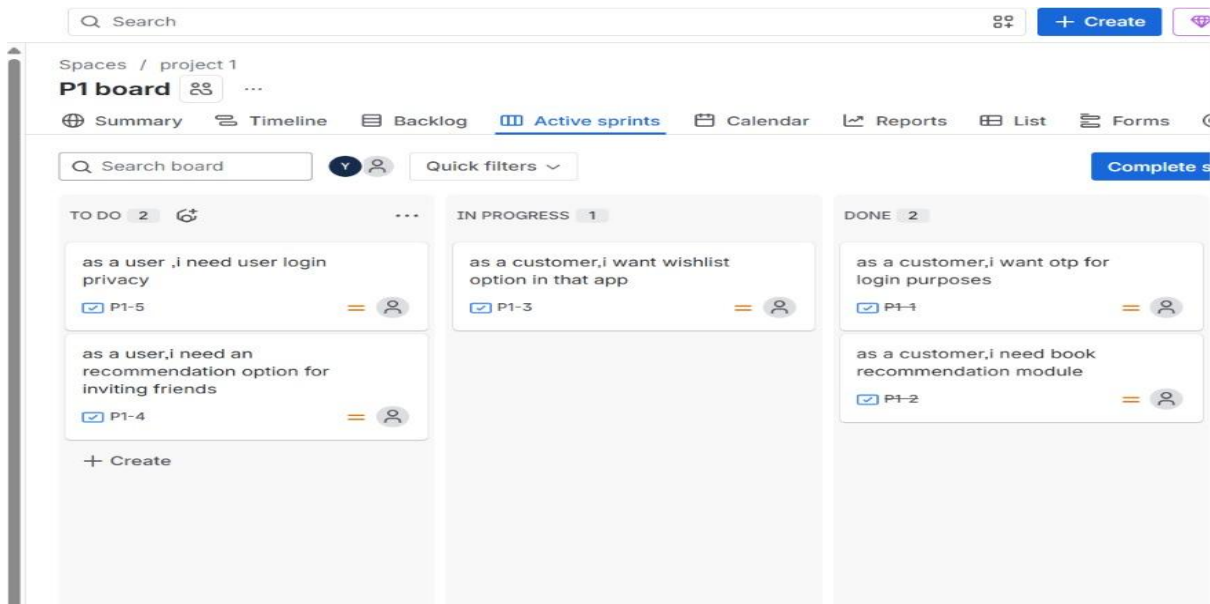

Figure 3. Creating Jira Tasks.

Step 4:

Return to the Confluence page and insert the **Jira Macro** using **/Jira**. Embed the created Jira issues into the page so that task details are displayed automatically.

The screenshot shows a Confluence page titled "Library Management System Project Overview" by yashmita. The page contains a Jira macro displaying a table of tasks. The table has columns for Key, Summary, Assignee, Priority, and Status. The tasks are as follows:

Key	Summary	Assignee	Priority	Status
P1-5	as a user ,I need user login privacy		Medium	TO DO
P1-4	as a user,i need an recommendation option for inv...		Medium	TO DO
P1-3	as a customer,i want wishlist option in that app		Medium	IN PROGRE...
P1-2	as a customer,i need book recommendation module		Medium	DONE
P1-1	as a customer,i want otp for login purposes		Medium	DONE

The page also shows a "Synced just now · 5 items" status at the bottom right of the macro.

Figure 4. Embedding Jira Issues in Confluence.

Step 5:

Insert a **Progress Bar (Progress Tracker)** to display the overall completion percentage of the embedded Jira tasks.

Step 6:

Save and publish the Confluence page. Verify that all Jira tasks, their current statuses, and the progress tracker are displayed correctly.

The screenshot shows the published Confluence page. The Jira macro is still present, showing the same table of tasks. Below the macro, a "Sprint Progress" section is visible, displaying a progress bar and a table of metrics.

Metric	Value
Total Tasks	5
Completed	2
In Progress	1
To Do	2
Progress	40% COMPLETE

The progress bar shows 40% completion, corresponding to the 2 completed tasks out of 5 total tasks.

Figure 5. Published Confluence Page.

Result

The Jira tasks were successfully linked with Confluence using the Jira Macro. The embedded issues and progress tracker displayed the project status effectively, demonstrating how Jira and Confluence can be integrated to improve task management, documentation, collaboration, and progress monitoring during software development.
