

(JIRA)

EXPERIMENT 12: MOSCOW

You are designing a Task Management System for a small team. The system should include the following features:

- 1. User Login and Role Assignment**
- 2. Task Creation and Assignment**
- 3. Task Prioritization and Deadlines**
- 4. Progress Tracking and Reporting**

Prioritize these requirements using the MoSCoW in Jira.

Aim

The objective of this experiment is to design a **Task Management System** for a small team and prioritize its requirements using the **MoSCoW** and **Kano** models in Jira Software.

Software Requirements

Software: Jira Cloud (Web Application)

Web Browser: Google Chrome / Microsoft Edge

Internet Connection: Required

Theory

Requirement prioritization is an important activity in software engineering that helps development teams focus on implementing the most valuable features first. The **MoSCoW model** categorizes requirements into **Must Have**, **Should Have**, **Could Have**, and **Won't Have** based on their priority. The **Kano model** classifies requirements based on customer satisfaction into **Basic (Must-be)**, **Performance**, and **Delighter (Excitement)** features. Using these models in Jira helps teams plan projects efficiently, manage resources, and deliver high-quality software.

Procedure

Step 1:

Open a web browser, log in to **Jira Software**, and create a new project for the Task Management System.

Figure 1. Creating a New Jira Project.

Step 2:

Create the following four Jira issues:

- User Login and Role Assignment
- Task Creation and Assignment
- Task Prioritization and Deadlines
- Progress Tracking and Reporting

Figure 2. Creating Jira Issues.

Step 3:

Apply the **MoSCoW** prioritization model by assigning the following categories:

- **Must Have:** User Login and Role Assignment

- **Must Have:** Task Creation and Assignment
- **Should Have:** Task Prioritization and Deadlines
- **Could Have:** Progress Tracking and Reporting

As we roll out 'work' as the new term for items tracked in Jira, you may still see 'Issue' in some areas. [Read about this terminology change](#)

Priorities

Add new priorities or edit the priority order by moving it up or down, or setting it to a specific position number.

Order	Icon and name	Description	Color	Schemes	Actions
1	🔴 Highest	This problem will block progress.	Red	Default priority scheme	✎ 🗑️ ⋮
2	🔴 High	Serious problem that could block progress.	Red	Default priority scheme	✎ 🗑️ ⋮
3	🟡 Medium	Has the potential to affect progress.	Orange	Default priority scheme	✎ 🗑️ ⋮
4	🟢 Low	Minor problem or easily worked around.	Green	Default priority scheme	✎ 🗑️ ⋮
5	🟢 Lowest	Trivial problem with little or no impact on progress.	Green	Default priority scheme	✎ 🗑️ ⋮
6	🔴 Must	Must have	Red	2 schemes	✎ 🗑️ ⋮
7	🟢 Should	Should have	Green	2 schemes	✎ 🗑️ ⋮
8	🟡 Could	Could have	Orange	2 schemes	✎ 🗑️ ⋮
9	🔴 Won't	Won't have	Red	2 schemes	✎ 🗑️ ⋮

Priority schemes

Associate a priority scheme with your spaces by using priority schemes. If you haven't associated a priority scheme with a space, the default priority scheme will be used.

You can find your priority schemes in the left sidebar.

Edit priority scheme

Details Spaces

Enter details of the new priority scheme and select **Spaces** to associate it with spaces. You can also change the default priority for this scheme here.

Step 4:

Open the **Kanban Board** or **Backlog** to verify that all Jira issues display their assigned MoSCoW priorities and Kano classifications. Save the changes.

Figure 4. Verifying Requirement Classifications.

Result

The requirements of the Task Management System were successfully prioritized using the **MoSCoW** and **Kano** models in Jira Software. The experiment demonstrated how requirement prioritization helps development teams identify essential features, improve planning, allocate resources effectively, and enhance customer satisfaction during software development.
