

(JIRA)

EXPERIMENT 13: KANO

You are tasked with developing an Online Learning Platform. The platform should include the following functionalities:

1. Course Enrollment and Registration
2. Video Lecture Streaming
3. Interactive Quizzes and Assignments
4. Progress Tracking Dashboard
5. Peer-to-Peer Discussion Forums
6. Certificate Generation

Use Jira to categorize and prioritize these requirements using Kano techniques.

Aim

The objective of this experiment is to develop an **Online Learning Platform** project in Jira Software and categorize its requirements using the **Kano** prioritization techniques to support effective project planning and requirement management.

Software Requirements

Software: Jira Cloud (Web Application)

Web Browser: Google Chrome / Microsoft Edge

Internet Connection: Required

Theory

Requirement prioritization enables development teams to identify the most important features that should be implemented first. The **Kano** model classifies features as **Basic**, **Performance**, or **Delighter** based on customer expectations. Integrating these techniques in Jira helps teams prioritize tasks, improve sprint planning, and deliver software that meets user needs efficiently.

Procedure

Step 1:

Open a web browser, log in to **Jira Software**, and create a **Scrum Project** named **Online Learning Platform**. Create six project tasks related to the application.

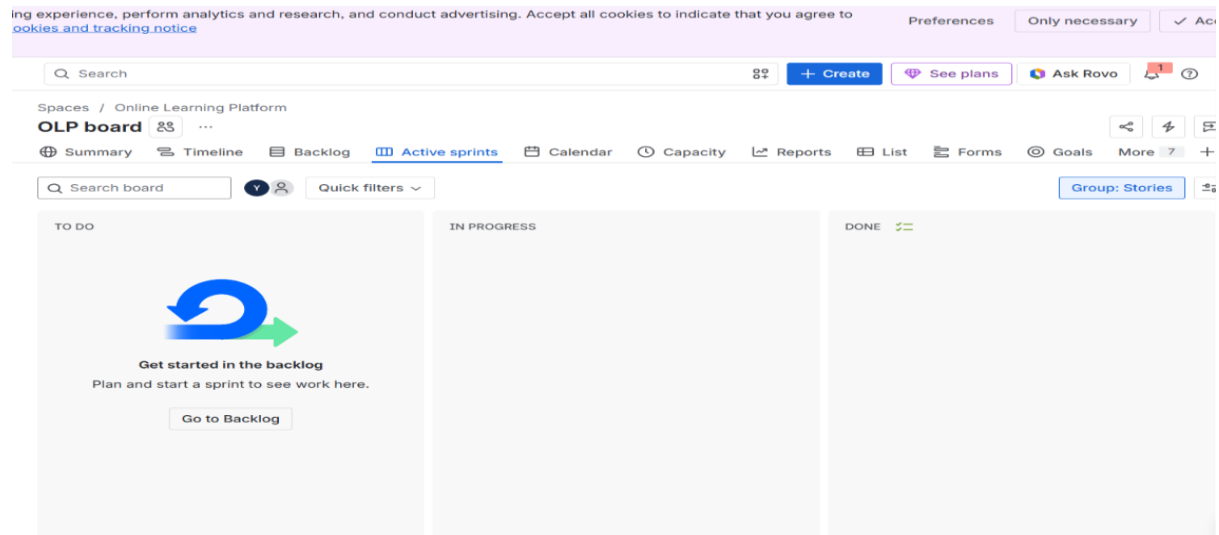

Figure 1. Creating the Scrum Project.

Step 2:

Create a new **Sprint** and move all the created tasks from the **Backlog** into the sprint for development.

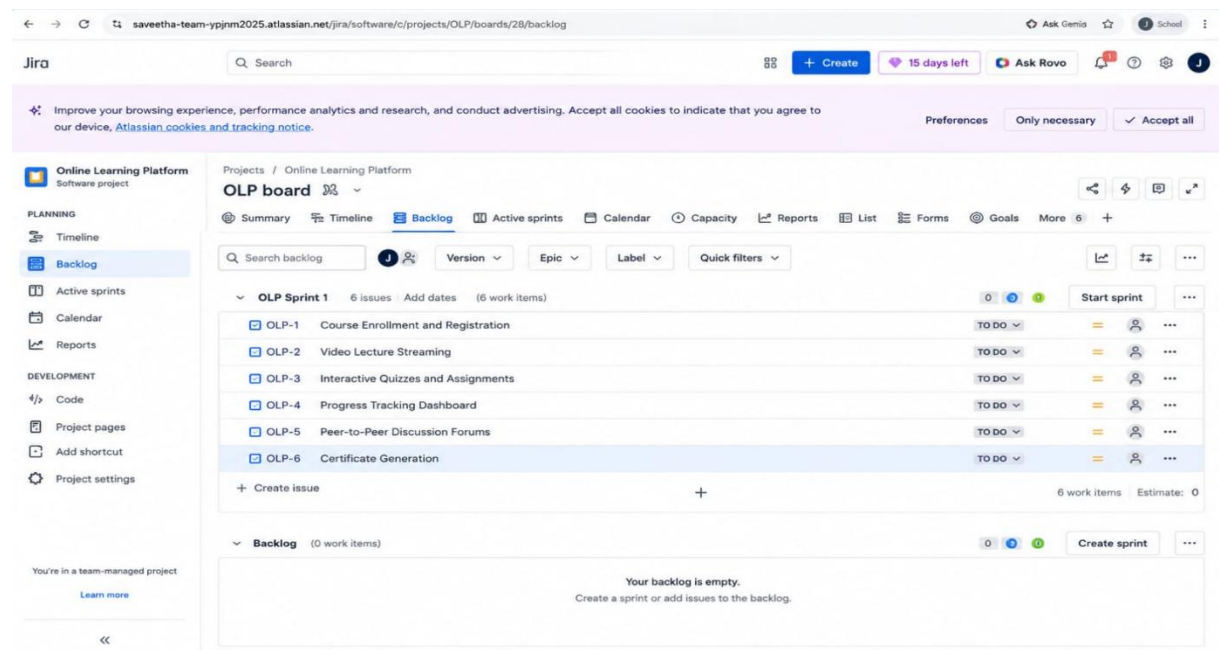

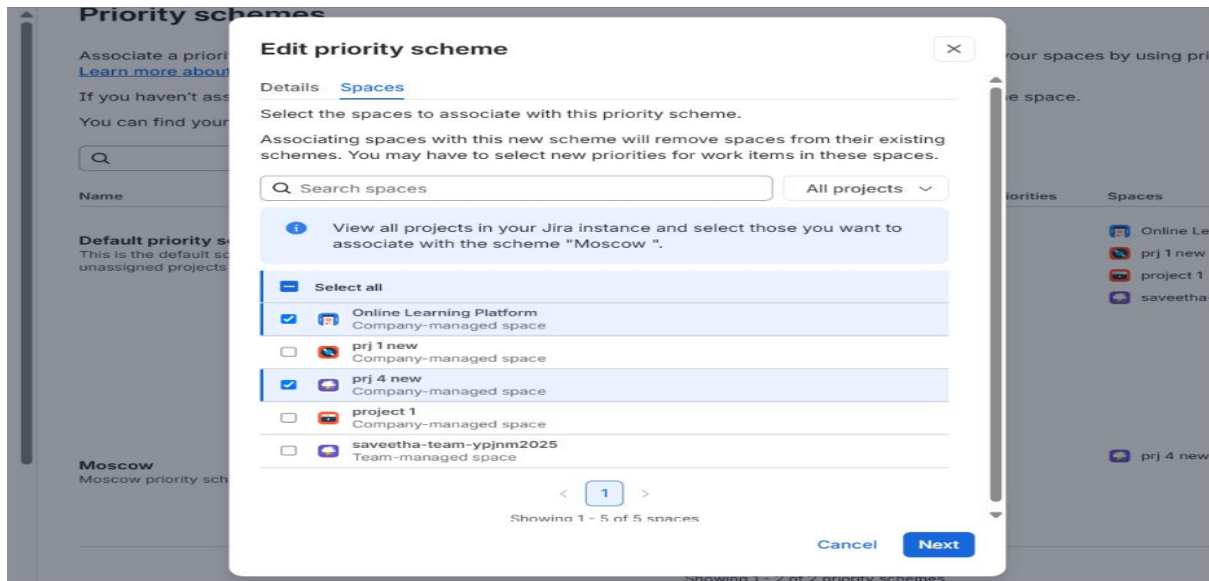

Figure 2. Creating and Planning the Sprint.

Step 3:

Assign **Kano** categories to each issue using the following labels:

- **Basic**
- **Performance**
- **Delighter**

Order	Icon and name	Description	Color	Schemes	Actions
1	Basic	This problem will block progress.	Red	Default priority scheme	
2	High	Serious problem that could block progress.	Red	Default priority scheme	
3	Performance	Has the potential to affect progress.	Orange	Default priority scheme	
4	Low	Minor problem or easily worked around.	Grey	Default priority scheme	
5	Delighter	Trivial problem with little or no impact on progress.	Grey	Default priority scheme	
6	Must	Must have	Red	2 schemes	
7	Should	Should have	Blue	2 schemes	
8	Could	Could have	Blue	2 schemes	
9	Won't	Won't have	Red	2 schemes	

Edit priority

Name *

Delighter

Description

Trivial problem with little or no impact on progress.

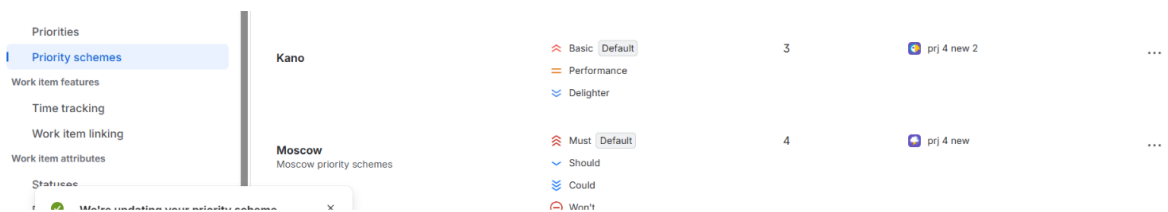

Figure 3. Applying Kano Classifications.

Step 4:

Save all changes and verify that every Jira issue displays the correct **Kano** labels.

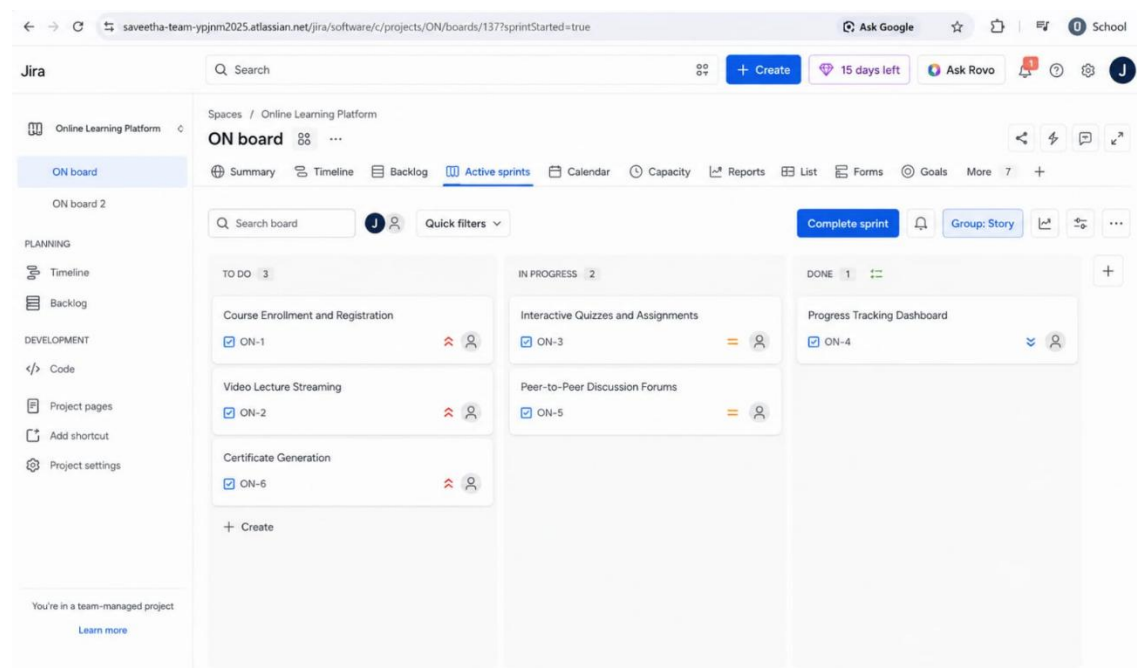

Figure 4. Verifying Requirement Labels.

Result

The **Online Learning Platform** project was successfully created in Jira Software. The project requirements were categorized using the **Kano** techniques, demonstrating how feature prioritization supports effective sprint planning, improves requirement management, and helps deliver software that meets both business objectives and user expectations.
