

(Git/Github)

EXPERIMENT 25:

Create a new GitHub repository for a personal project. Initialize the repository with a README.md file. Then, clone the repository to your local machine, make some changes to the README.md (e.g., add a project description), and push the changes back to GitHub.

Tasks:

- Create a GitHub repository.
- Clone the repository to your local machine.
- Edit the README.md file.
- Stage, commit, and push your changes to GitHub.

Aim

To create a GitHub repository, clone it to the local machine, modify the README.md file, commit the changes, and push them back to GitHub.

Software Requirements

- GitHub Account
- Git (Latest Version)
- Visual Studio Code
- Internet Connection
- Windows Operating System

Procedure

Step 1:

Create a GitHub Repository

1. Open the GitHub website and sign in.
2. Click the + icon and select **New repository**.
3. Enter the repository name **PersonalProject**.
4. Add a description (optional).
5. Select **Public** visibility.
6. Check **Add a README.md file**.
7. Click **Create Repository**.

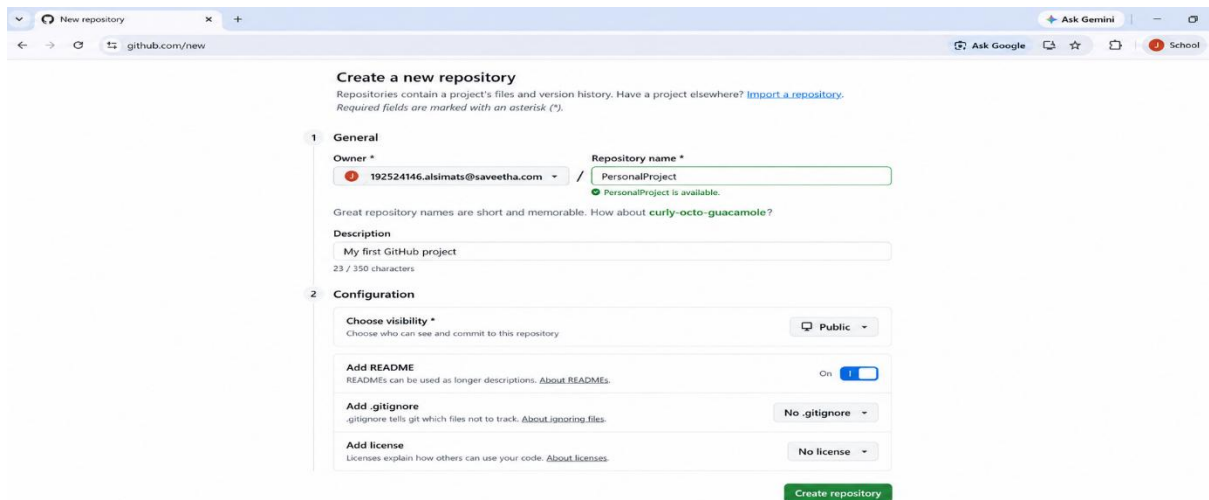

Figure 1: Creation of GitHub Repository

Step 2:

Copy Repository URL

1. Open the created repository.
2. Click the **Code** button.
3. Copy the HTTPS repository URL.

Example:

`https://github.com/username/PersonalProject.git`

Step 3:

Open VS Code

1. Launch Visual Studio Code.
2. Open **Terminal** → **New Terminal**.

Step 4:

Navigate to the Desired Folder

Type:

`cd Documents`

Step 5:

Clone the Repository

Execute:

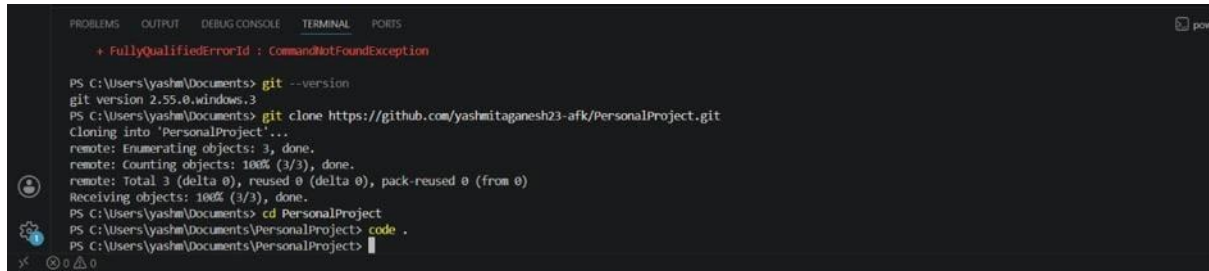

```
git clone https://github.com/username/PersonalProject.git
```

After successful cloning, move into the project folder:

```
cd PersonalProject
```

Open the project:

```
code .
```

```

PS C:\Users\yasha\Documents\PersonalProject> code .
PS C:\Users\yasha\Documents\PersonalProject> |
```

Figure 2: Cloning the GitHub Repository

Step 6:

Edit the README.md File

1. Open **README.md**.
2. Add the project description.

Example:

```
# PersonalProject
```

```
This is my first GitHub project.
```

This project demonstrates basic Git and GitHub operations such as cloning, editing files, committing changes, and pushing them to GitHub.

Save the file.

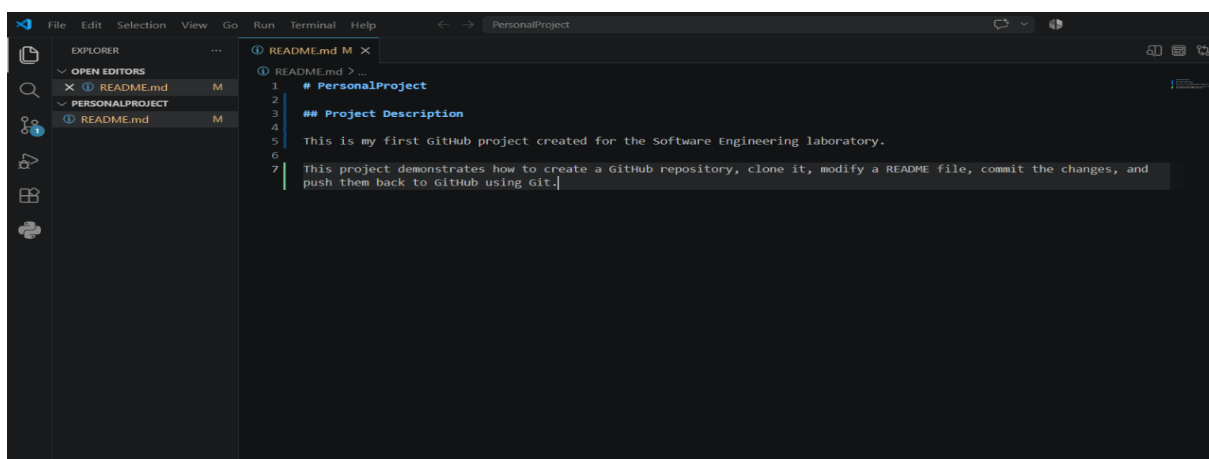

Figure 3: Editing the README.md File

Step 7:

Check Repository Status

Execute:

git status

Step 8:

Stage the Changes

Execute:

git add README.md

Step 9:

Commit the Changes

Execute:

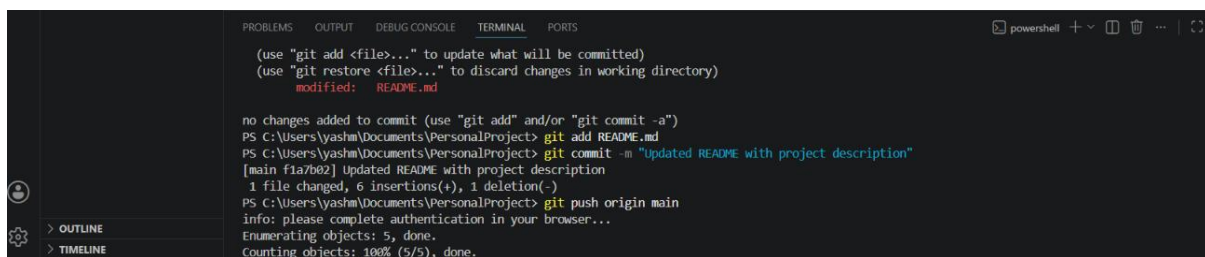

git commit -m "Updated README with project description"

Step 10:

Push the Changes

If the branch name is **main**:

git push origin main

```

Enumerating objects: 5, done.
Counting objects: 100% (5/5), done.
```

Figure 4: Committing the Changes

Step 11:

Verify

1. Refresh the GitHub repository.
2. Verify that the updated **README.md** file appears in the repository.

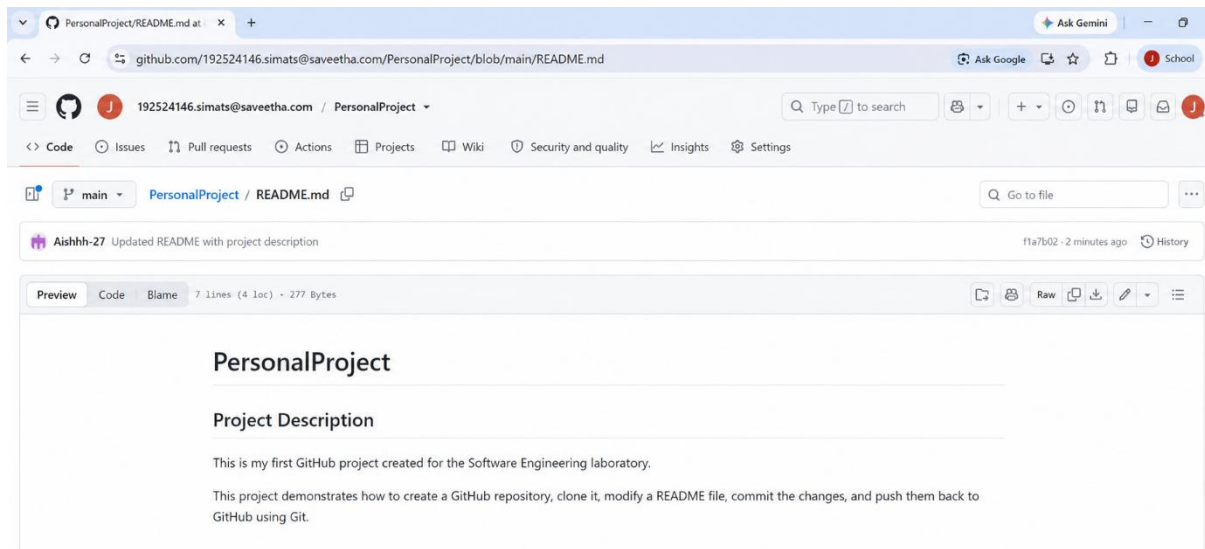

Figure 5: Updated GitHub Repository After Push

Commands Used

```
cd Documents
git clone https://github.com/username/PersonalProject.git
cd PersonalProject
code .
git status
git add README.md
git commit -m "Updated README with project description"
git push origin main
```

Result

Successfully created a GitHub repository, cloned it to the local machine, modified the README.md file, committed the changes, and pushed the updated repository to GitHub.
